kiaros testmanagement

The quality management of software projects is the connecting link between software development and the customer.

As a test manager you are responsible for governing the complete test process. Despite frequent changes in the requirements and software versions, often under time pressure, you are expected to give well-founded and precise status reports.

How to keep track of things?

The key areas of test management consist of the gathering, managing and evaluating of all relevant data of the test process.

Klaros-Testmanagement supports you in these tasks with a user-friendly web interface and a multitude of useful features. This way you are able to have this demanding task under control - right from the start of the project.

N		Sector Street
5 2 5 2	# Ph. 1.11	1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1. 1

What tests have been executed and with which results?

What test cases are related to which changes in the requirements?

What is the current state of our test coverage?

Which version of the software gave which test results?

Klaros-Testmanagement is an Ajax based web application, supporting the test process in an optimal way. With a multitude of interfaces for integration with other applications, it can be utilized in almost any environment.

Klaros-Testmanagement allows the import of data from other sources, like e.g. Excel sheets or other test applications. The integration with issue trackers like JIRA and continuous integration servers like Hudson allow the automation of tedious manual procedures during the development cycle.

The enterprise edition supports authentication via LDAP, the import of XML-Data and a large amount of possibilities for configuring reports to individual requirements.

Planning projects

With Klaros-Testmanagement you are able to individually configure your test projects and administer the complete test data in a central database.

The captured tests can be assembled to test plans and executed by your testers against defined software versions and system configurations.

Klaros-Testmanagement allows the tracing of tests to individual requirements as well as version and change log support of test cases.

Evaluating Results

Klaros-Testmanagement allows to easily generate different graphical reports with the push of a button. An individual configuration allows a goal oriented evaluation and presentation of data.

Different output formats such as PDF, HTML, RTF, CSV and others facilitate archiving and distributing the reports. The graphical presentation enhances clarity and improves the communication with developers and customers alike.

This way a complete and comprehensible history of the test process develops which lasts until the end of the project.

Manage your test process comprehensivly

Test cases and test results Allocation of requirements and issues Revision control and archiving Project-specific configuration

Executing Tests

A separate web client enables the automated logging of the manual execution of complete test plans or individual tests. The time-consuming and error-prone manual test documentation is hereby avoided.

Through the integration with issue tracking systems the test results can be submitted immediately and comprehensible to the development department.
